Sequence 1, Application US/08851362D

Patent No. 623583

GENERAL INFORMATION:

APPLICANT: Jakobovits, Aya

APPLICANT: Vang, Xiao-Dong

APPLICANT: Jai, Xiao-Dong

APPLICANT: Jai, Xiao-Chi

TITLE OF INVENTION: Human Monoclonal Antibodies to Epidermal

TITLE OF INVENTION: Growth Factor Receptor

FILE REPERENCE: Cell 4.20

CURRENT APPLICATION NUMBER: 1997-05-05

NUMBER OF SEQ ID NOS: 49

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 1

LENGTH: 22

Sequence 2, Application US/09485077A

Patent No. 645830

GENERAL INFORMATION:
APPLICANT: Mucharide, Anil
APPLICANT: Randa, Gopal

TITLE OF INVENTION: Methods and Compositions for Treatment of Restenosis
FILE REFERENCE: NIH-05047

CURRENT APPLICATION NUMBER: US/09/485,077A

CURRENT APPLICATION NUMBER: PCT/US98/16569

PRIOR FILING DATE: 1998-07-08

PRIOR FILING DATE: 1997-07-08

NUMBER OF SEQ ID NOS: 18

SOFTWARE: PatentIn version 3.0

SEQ ID NO 2

LENGTH: 20

TURENT TO APPLICATION NUMBER: 60/054,967

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
US-08-851-350-32/c

Sequence 32, Application US/08851350

Patent No. 6057122

GENERAL INFORMATION:

APPLICANT: Abbott Laboratories

TITLE OF INVENTION: POLYNUCLEOTIDES ENCODING SAME AND METHODS

TITLE OF INVENTION: FOR INHIBITING ANGIOGENESIS

TITLE OF SEQUENCES: 38

NUMBER OF SEQUENCES: 38

CORRESPONDENCE ADDRESS:

ADDRESSEE: Abbott Laboratories

STREET: 100 Abbott Park Road

CITY: Abbott Park

STREET: 110
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RESULT 54

; Patent No. 6194150
; GENERAL INFORMATION:
    APPLICANT: Stinchcomb, Daniel T.
    APPLICANT: Jarves, Thale
; APPLICANT: MCSWiggen, Jamee
; TITLE OF INVENTION: METHOD AND REAGENT FOR THE
; TITLE OF INVENTION: INDUCTION OF GRAFT TOLERANCE
; TITLE OF INVENTION: AND REVERSAL OF IMMUNE RESPONSES
; NUMBER OF SEQUENCES: 2751
; CORRESPONDENCE ADDRESS:
    ADDRESSEE: Lyon & Lyon
    STREET: 833 West Fifth Street
                                                        APPLICANT: Jarvis, Thale

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             US-09-673-809-86

US-09-673-809-86

Sequence 86, Application US/09673809

Patent No. 628-86

GENERAL INFORMATION:

APPLICANT: INNOGENETICS N.V.

TITLE OF INVENTION: Method for typing of HLA alleles.

TITLE APPLICATION NUMBER: US/09/673,809

CURRENT APPLICATION NUMBER: 2000-10-20

PRIOR APPLICATION NUMBER: 98870088.6

PRIOR FILING DATE: 1998-04-20
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBN PC comparatible
COMPUTER: IBN PC comparatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOPTWARE: PatentIn Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/07/974,409C
FILING DATE: 12-NOV-1992
CLASSIFICATION: 435

US-08-277-857-95/c

Sequence 95, Application US/08277857

Patent No. 5733781

GENERAL INFORMATION:

APPLICANT: Thoras Brendan Ryder

APPLICANT: Thoras Brendan Ryder

APPLICANT: Thoras Brendan Ryder

TITLE OF INVENTION: COMPOUNDS AND METHODS FOR INHIBITING

TITLE OF INVENTION: PROPAGATION OF HUMAN

TITLE OF INVENTION: IMMUNODEFICIENCY VIRUS

NUMBER OF SEQUENCES: 101

CORRESPONDENCE ADDRESS:

ADDRESSEE: Lyon & Lyon

Sequence 7, Application US/09677045

Patent No. 6346386

GENERAL INFORMATION:
APPLICANT: Blentchas-Johnson, Kojo
APPLICANT: Blentchas-Johnson, Kojo
TITLE OF INVENTION: Method of Solution-based Scanning for Alterations in a
TITLE OF INVENTION: DNA Segment Using a Double-stranded DNA Binding Dye and
TITLE OF INVENTION: Fluorescence Melting Profiles
TITLE OF INVENTION: Fluorescence Melting Profiles
GURRENT APPLICATION NUMBER: US/09/677,045
CURRENT FILING DATE: 2000-09-29
NUMBER OF SEQ ID NOS: 10
SOFTWARE: Patentin version 3.0
SEQ ID NO 7
LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      US-09-487-253A-9/c
